

Botanical Garden
Singapore St. May 18th 1891

Sir

As my little ^{knowledge} from your letter
of some time past I have been
investigating the origin of Malayan
vegetable medicines and poisons and
have collected a considerable mass
of information about them, but as
a part of it must necessarily be based
on ^{the} ~~the~~ ^{idea} ~~idea~~ ^{from} ~~idea~~ ^{from} the results of
most Malays to impart information on
the subject the following schedule has
been drawn up for the purpose of calling
your attention to the subject and to
solicit our belief of ~~reference~~, your
in investigating the subject.

If possible in addition to the information
you may be able to give in the schedule
specimens of the parts used would be
valuable and would be deposited
in the Puffes Museum and to assist
in their botanical identification
specimens of the leaves and flowers
pressed in paper should be sent and
the fruit if possible.

Native
name
Vol.

part used

for what
used

(Dose and mode of
preparation if any)

In dry specimens it is only necessary
to lay them flat between paper and
place a weight just sufficient to press
without crushing and the papers
changed at intervals of three or four days
Paper is ^{well} efficient and is sent from
the Botanical Gardens on application
and any expense you may be put to
will be reimbursed

The number from the schedule
of specimens will be returned to
you for reference
